Detailed Review of Key Vocabulary Terms

1. Ecosystem

Definition: A community of different organisms interacting with each other and with their physical environment within a specific area.

Expert Insight: An ecosystem encompasses both biotic components (plants, animals, microorganisms) and abiotic components (air, water, minerals). The stability and health of an ecosystem depend on the balance of these interactions. For example, a pond ecosystem includes fish, aquatic plants, insects, water chemistry, and sunlight.

Application: Understanding ecosystems is crucial for conservation efforts, managing biodiversity, and predicting environmental changes.

2. Biotic Factors

Examples:

- Predators controlling prey populations.
- Pollinators aiding plant reproduction.
- Decomposers recycling nutrients.

3. Abiotic Factors

Definition: The non-living physical and chemical elements in an environment, such as temperature, sunlight, soil type, and water availability.
